Annotation tasks: Person

Please make any necessary changes so that "Person" in the "person" package is immutable. After you're done, there should be no way to change an instance of a class after it is created. You should use Glacier's `@Immutable` feature as necessary so that the compiler can enforce immutability. You can build the project with Build > Rebuild Project.

During this and future tasks, you can use the Internet if you like.

Annotation tasks: Accounts

Please make any necessary changes so that "Accounts" in the "useraccounts" package is immutable. After you're done, there should be no way to change an instance of a class after it is created. You should use Glacier's `@Immutable` feature as necessary so that the compiler can enforce immutability. You can build the project with Build > Rebuild Project.

During this and future tasks, you can use the Internet if you like.
